1 Executive summary

This report provides thorough analyses on the performance of the tourism sector in Sharjah during second quarter of 2019 and the first half on different aspect of the industry. Overall, the second quarter in 2019 had fluctuations in the results compared to same period last year. On one hand, guest arrivals grew by approximately 2% whereas occupancy levels in hotels declined by 1%.

The total number of hotel guests visiting Sharjah during Q2 is approximately 385 thousand who stayed 810 thousand nights in Sharjah's accommodation sector, and that's about 2.10 nights per guest. Furthermore, the majority of guests about 30% of market share are from Europe followed by Asia (23%), GCC and Arabs, which accounted for 14% and 18% respectively. Guests from Russia dominated the top source markets during second quarter with 19% of market share, even though there was a decline of 12% compared to Q2 in 2018. The same decrease continued since fourth quarter in 2018. A similar decline is seen in Chinese market which decreased by 52% during Q2. As the holy month of Ramadan was during May, the usual slowdown in the sector is evident in the decrease in occupancy level, daily average rate, total revenue, and revenue per available room. Furthermore, the effects of the global market particularly in the opening of previously closed preferred destinations for the Russian market have also contributed to the overall decline witnessed in the sector.

The overall performance of Sharjah Tourism sector during the first half of 2019, remained mediocre. Guests flowing to Sharjah decreased by 3% compared to the first half of 2018. Nevertheless, some source markets have shown recovery from previous quarters such as Indian market which increase by 26% compared to last year.

11 GLOSSARY:

❖ ADR (Average Daily Rate)

A measure of the average rate paid for rooms sold, calculated by dividing room revenue by rooms sold.

ADR = Room Revenue / Rooms Sold

Occupancy Rate

Occupancy is the percentage of available rooms that were sold during a specified period of time. Occupancy is calculated by dividing the number of rooms sold by rooms available.

Occupancy = $(Rooms Sold / Rooms Available) \times 100$

RevPAR (Rev Per Available Room)

Revenue per Available Room (RevPAR) is the total guest room revenue divided by the total number of available rooms. RevPAR differs from average daily rate (ADR) because RevPAR is affected by the amount of unoccupied available rooms, while ADR shows only the average rate of rooms actually sold.

 $RevPAR = Occupancy \times ADR$
